

Food and Beverage Group

JMP Engineering

Turning business thinking to performance

Engineering Solutions for the Food and Beverage Industry

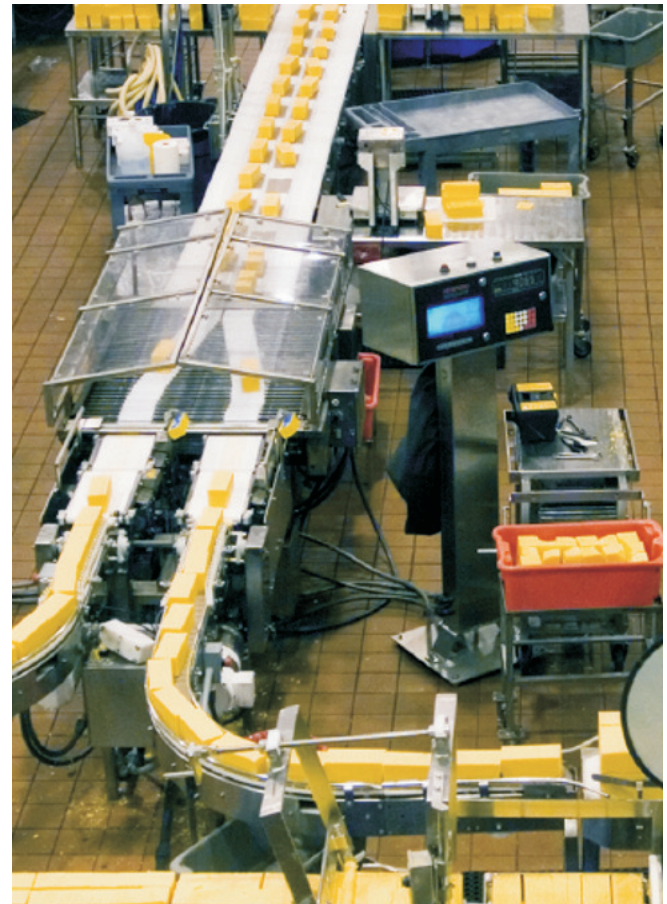

Controls, Automation & Information Expertise

JMP Engineering designs and integrates technology-based solutions into production processes to improve plant productivity, profitability and quality. Food and Beverage customers trust JMP to recommend new ideas that enhance their sustainability and performance by:

- Improving line speed and throughput
- Improving equipment efficiency and minimizing downtime
- Reducing costly ingredient and product waste
- Managing energy like a controllable raw material
- Streamlining the production processes
- Improving plant safety
- Meeting federal regulations and industry standards

Solutions, Integration & Project Management

- Barcode and RFID identification
- Batching systems
- Bulk material handling
- Canning lines
- CartonFlex Loader
- Clean-in-place (CIP)
- Complete safety systems
- Control solutions for R&D product development
- Equipment upgrades and migration
- Execution systems & production reporting
- Filling equipment
- High speed packaging
- Inventory solutions
- Metering, monitoring and targeting
- Mixing equipment
- MultiPick for Distribution Centers
- Oven control
- Recipe management
- Service support contracts
- Vision systems
- Weighing systems
- Wireless and mobility solutions
